PROFESSIONAL SUMMARY

Data Analyst with SQL experience across PMO and People & Culture reporting roles, cutting reporting time by 35% and maintaining 98% compliance across 550+ records. MSc Business Analytics graduate with hands-on ETL and data warehousing project experience, including an automated pipeline and SQL warehouse. Seeking to bring proven reporting accuracy and dashboard delivery to a hybrid Data Analyst role.

KEY SKILLS

Data Analysis & Modelling: SQL (complex queries, joins, CTEs, window functions), data modelling, ETL and data pipeline development, large/complex dataset management, trend and anomaly detection, data validation and accuracy checks

Visualisation & Reporting: Power BI (PL-300 certified), Tableau, Excel (formulas, modelling, pivot tables); dashboard development, weekly/monthly business and compliance reporting

Tools & Platforms: SQL Server (SSMS), Python, Microsoft Azure (DP-900 certified), Microsoft 365 (Excel, Word, PowerPoint, Teams, SharePoint)

Working Style: Analytical thinker with strong attention to detail, translates complex data for non-technical audiences, effective cross-functional collaborator

EXPERIENCE

People & Culture Data Admin, Primark

Sep 2025 – Present

- Managed and analysed data for 550+ staff, producing accurate weekly and monthly reports that supported audits and leadership decision-making.
- Cut recurring people-reporting time by 35% by replacing manual, spreadsheet-heavy processes with standardised, repeatable reporting, freeing analyst hours for higher-value investigation work.
- Maintained 96% data compliance across 550+ employee records by embedding routine audit and validation checks into the team's workflow, catching errors at source rather than downstream.
- Delivered 90% of project milestones on time supporting the business-wide rollout of myP&C, Primark's people-system platform.
- Designed and delivered hands-on myP&C training for line managers, improving data quality at the point of entry, where most people-data errors originate.
- Communicated complex people data to non-technical audiences through clear reporting packs, collaborating with managers across teams to translate business needs into reporting output.
- Advised HR stakeholders on headcount, absence, and turnover trends, translating raw people data into clear, decision-ready answers.

PMO / Data Analyst, Pratapvasini

Sep 2024 – Aug 2025

Digital transformation programme

- Analysed complex, multi-workstream data sets to surface trends and anomalies, translating findings into recommendations that guided strategic decisions across the digital transformation programme.
- Built and maintained dashboards and reports in Power BI, Tableau and Excel, replacing manual reporting processes and giving leadership faster access to accurate, actionable insight.
- Maintained data accuracy across reporting processes by running routine validation checks, publishing performance and compliance reports used for leadership oversight.
- Supported initiatives to improve data capture accuracy at the point of entry, raising data standards and reporting programme outcomes to stakeholders.

Project Data Analyst Intern, MyCaptain

Jun 2022 – Aug 2023

- Facilitated stakeholder workshops, effectively bridging business and technical development teams to scope requirements and ensure aligned deliverables.
- Oversaw timelines, sprint tracking, and backlog management for multiple Agile projects using industry tools including JIRA and Trello.
- Built and maintained program KPI dashboards to enable executives to make data-driven decisions on project direction and scope.

- Prepared concise project updates, risk logs, and progress reports, simplifying complex technical information for senior leadership and project teams.

PROJECTS

SQL Data Warehouse & Analytics

[Github Repo](#)

- Built a SQL Server data warehouse using Bronze/Silver/Gold medallion architecture, consolidating ERP and CRM source data into a star schema of fact and dimension tables; architectural structure followed a guided data warehouse tutorial, with independent implementation, cleansing logic, and documentation.
- Extended the warehouse with an original 17-script SQL analytics layer, including 4 self-designed analyses beyond the guided material: retention and repeat-purchase rate, RFM customer segmentation (NTILE), month-over-month growth (LAG), and basket-affinity analysis via self-join, plus two production-style reporting views built for direct Power BI/Tableau consumption.

Consumer Shopping Behavior Analytics

[Github Repo](#)

- Delivered end-to-end analysis of a 3,900-row consumer shopping dataset (\$233K total revenue) covering revenue drivers, customer segmentation, and product performance, by cleaning and structuring data in Python (pandas), running exploratory SQL analysis in SSMS across 15 business questions in four analytical themes, and visualising findings across a multi-dashboard Tableau build dashboard.
- Additional SQL project: cleaned and queried a 2,000-record retail transactions dataset in SQL Server, answering business questions on best-selling months, top customers, and sales-by-shift patterns using window functions and conditional logic.

End-to-End E-Commerce Data Pipeline

[Github Repo](#)

- Designed a normalised (3NF) relational schema for a simulated e-commerce platform and built an automated ETL pipeline using GitHub Actions, running data ingestion, validation, and referential-integrity checks on a 6-hour schedule.
- Analysed purchasing behaviour across 7,684 products sold, reporting on membership-tier split (70/30 Prime to non-Prime), category demand, and regional delivery distribution using R and Quarto.

Library Management System

[Github Repo](#)

- Designed a relational schema in MySQL covering branches, employees, members, and book issue/return tracking, implementing full CRUD operations, CTAS summary tables, and stored procedures for issuing and returning books and reporting on branch performance.
- Additional SQL project: cleaned and queried a 2,000-record retail transactions dataset in SQL Server, answering business questions on best-selling months, top customers, and sales-by-shift patterns using window functions and conditional logic.

EDUCATION

MSc Business Analytics, Warwick Business School

2023 – 2024

Modules: Advanced Data Analysis, Digital Strategies & Agile Transformation, Supply Chain Analytics

BE Electronics Engineering, University of Mumbai

2019 – 2023

Modules: Advanced Database Management, Management Information Systems, Project Management
